Thank you for taking a few minutes to read our newsletter. We've hand-picked the following articles in response to questions that we have been hearing from our clients and radio listeners over recent months; we hope you find them valuable!

In this issue of our quarterly newsletter we offer guidance to investors on making sense of earnings season reports, and the debate around choosing passive vs. active mutual funds. In addition, we have taken a dive into the current state of the social security system, including some important tips on avoiding scams targeting social security recipients.

Be sure to tune in to AM790, weeknights at 5PM, to hear Don, Steven, Donna and Nathan discuss the topics that matter to you on the MoneyTalk radio program. Missed tonight's show? Listen in to the MoneyTalk Podcast at sowafinancial.com/moneytalk-radio, or by searching "DON SOWA'S MONEYTALK" wherever you get your podcasts!

Q4 2019

Mutual Funds: Wading into the Passive vs. Active Debate

Social Security: Shoring Up America's Safety Net

What are the warning signs of financial scams targeting older individuals?

How can you avoid falling for the Social Security imposter scam?

Publicly traded companies are required to report their financial performance to regulators and shareholders on a quarterly basis. Earnings season is the often-turbulent period when most companies disclose their successes and failures.

U.S. companies included in the S&P 500 index suffered year-over-year earnings declines in the first two quarters of 2019.¹ Rising wages and higher material costs (partially due to tariffs imposed on traded goods) had started to cut into profit margins.²

Earnings reports are closely watched because they reveal a corporation's bottom line. However, they generally reflect past performance and may have little to do with future results.

Performance lingo

A quarterly report includes unaudited financial statements, a discussion of the business conditions that affected financial results, and some guidance about how the company expects to perform in the following quarters. Financial statements reveal the quarter's profit or net income, which must be calculated according to generally accepted accounting principles (GAAP). This involves subtracting operating expenses (including depreciation, taxes, and other expenses) from net income.

Earnings per share (EPS) represents the portion of total profit that applies to each outstanding share of company stock. EPS is often the figure that makes headlines, because the financial media tend to focus on whether companies meet, beat, or fall short of the consensus estimate of Wall Street analysts. A company can beat the market by losing less money than expected, or can log billions in profits and still disappoint investors who were counting on more.

An earnings surprise — whether EPS comes in above or below expectations — can have an immediate effect on a company's stock price.

Shaping perception

In addition to filing regulatory paperwork, many companies announce their results through press releases, conference calls, and/or webinars so they can influence how the information is judged by analysts, financial media, and investors.

Pro-forma (or adjusted) earnings may exclude nonrecurring expenses such as restructuring costs, interest payments, taxes, and other unique events. Although the Securities and Exchange Commission has rules governing pro-forma financial statements, companies have leeway to highlight the positive and minimize the negative. There may be a vast difference between pro-forma earnings and those calculated according to GAAP.

Many companies also take steps to manage expectations. Issuing profit warnings or positive revisions to previous forecasts may prompt analysts to adjust their estimates accordingly. Companies may also be able to time certain business moves to help meet quarterly earnings targets.

The media hype surrounding an earnings surprise can sometimes draw attention away from important details that may be revealed in a company's quarterly report. Factors such as sales growth, research and development, new products, consumer trends, government policies, and global economic conditions can all affect a company's longer-term prospects.

The return and principal value of stocks fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. The S&P 500 is an unmanaged group of securities that is considered to be representative of the U.S. stock market in general. The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index.

Mutual Funds: Wading into the Passive vs. Active Debate

It's fairly difficult — even for professional investors — to consistently "beat the market." This realization led to the creation of index mutual funds, which are passively managed investment vehicles designed to match the performance of a particular market index by owning the same securities included in the index.

Today there are hundreds of indexes and index funds tracking various types of assets.¹ Still, index funds are not the only game in town, and there is plenty of discussion in the financial media around whether investors are better off using passive or active investing strategies.

Share of Total U.S. Stock Market Value Held by Index Funds

Source: *The Wall Street Journal*, November 29, 2018

According to Morningstar, just 38% of active U.S. funds outperformed their benchmarks during the 12 months ending in December 2018, and success rates are even lower over longer periods. Even so, active and passive funds tend to perform differently during different market cycles, and they may serve a variety of purposes in your portfolio.²

Here are some pros and cons associated with both types of mutual funds.

A passive approach

Many of the well-known, third-party indexes that are commonly tracked by index mutual funds are broad based and capitalization weighted. Thus, index investing traditionally involves buying all the securities in a market or market sector and weighting them based on their value in the marketplace.

Passively managed index funds have less managerial involvement, so fees are often lower than they are for actively managed funds. Index funds may also buy and sell assets less frequently, and lower turnover may help minimize distributions subject to the capital gains tax. Tax efficiency may be an important consideration when mutual funds are owned in taxable accounts.

The money flowing in and out of index funds has become a more powerful force in the financial markets, and it's possible that their structure may be distorting prices of the individual assets in the index. For example, when investors buy or sell shares of an index fund, all of the underlying companies are treated the same (rewarded or punished) whether they deserve it or not.³

A hands-on strategy

Active fund managers strive to outperform benchmarks by hand picking securities based on rigorous research and a defined investment strategy. Thus, an actively managed fund offers investors the chance to outperform the overall market, although most of them historically have not.

An actively managed mutual fund may be more diversified than an index fund holding stocks in the same asset category, simply because the performance of a market-weighted index can be dominated by a small number of the largest companies. Diversification is a method used to help manage investment risk; it does not guarantee a profit or protect against loss.

Active managers also have more flexibility and may use a variety of trading strategies to help manage risks. For these reasons, some actively managed funds may offer defensive benefits when markets are falling.

Declare a draw

There is no need to pick a side in the active-versus-passive debate. Depending on your goals and risk profile, there may be plenty of room in a well-diversified portfolio for both types of mutual funds.

The return and principal value of stocks and mutual funds fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. The performance of an unmanaged index is not indicative of the performance of any specific security. Individuals cannot invest directly in an index.

Mutual funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Social Security: Shoring Up America's Safety Net

Future projections

In 2019, the trustees of Social Security reported that the Old-Age and Survivors Insurance (OASI) trust fund is projected to run out in 2034. At that time, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ever since a legal secretary named Ida May Fuller received the first Social Security retirement check in 1940, Americans have been counting on Social Security to provide much-needed retirement income. For many older Americans, Social Security is their main source of guaranteed retirement income — income that continues throughout their lifetimes and is indexed for inflation every year (in 2019, the cost-of-living adjustment, or COLA, was 2.8%).

Social Security provides more than just retirement income, though. It also provides disability and survivor insurance benefits. About 62 million people — more than one in six U.S. residents — collected some type of Social Security benefit in 2018, with approximately 80% of these recipients receiving Social Security retirement or survivor benefits.¹

How Social Security works

Social Security is a pay-as-you-go system, which means that payments from current workers (in the form of payroll taxes) fund benefits for current beneficiaries. The payroll tax rate for Social Security is 12.4%, with 6.2% paid by the employee and 6.2% paid by the employer (self-employed individuals pay the entire 12.4%). These payroll taxes are deposited into the Old-Age and Survivors Insurance (OASI) trust fund (for retirement and survivor benefits) and the Disability Insurance (DI) trust fund (for disability payments).

Because of demographic and economic factors, including higher retirement rates and lower birth rates, there will be fewer workers per beneficiary over the long term, worsening the strain on the trust funds. This year, the trustees of Social Security reported that the OASI trust fund is projected to run out in 2034. After that, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ideas for reform

There has been little national consensus by policymakers on how to deal with Social Security's looming demographic challenges. Meaningful reform will require broad bipartisan support, and the trustees have urged Congress to address Social Security's challenges sooner rather than later, so that solutions will be less drastic and can be implemented gradually, lessening the impact on the public.

Some Social Security reform proposals on the table include:

- Raising the current Social Security payroll tax rate — according to the 2019 trustees report, an immediate and permanent payroll tax increase to 15.1% (up from the current 12.4%) would be necessary to address the

long-range revenue shortfall (16.05% if the increase started in 2035)

- Raising or eliminating the ceiling on wages currently subject to Social Security payroll taxes (\$132,900 in 2019)
- Raising the full retirement age beyond the currently scheduled age of 67 (for anyone born in 1960 or later)
- Reducing future benefits — to address the long-term revenue shortfall, the trustees have noted that scheduled benefits would have to be immediately and permanently reduced by about 17% for all current and future beneficiaries, or by approximately 20% if reductions were applied only to those who initially become eligible for benefits in 2019 or later
- Changing the formula that is used to calculate benefits
- Changing the formula that is used to calculate the annual cost-of-living adjustment for benefits

Understand your retirement benefits

The amount you'll receive from Social Security is based on the number of years you've worked, the amount you've earned over your lifetime, and the age when you file for benefits. Your benefit is calculated using a formula that takes into account your 35 highest earnings years, but you don't need to work for that long to qualify for retirement benefits. Generally, you need to have earned a minimum of 40 work credits, which is about 10 years of work in a job covered by Social Security. If you haven't worked long enough to qualify on your own, you may qualify for spousal benefits based on your spouse's work record. A spousal benefit claimed at your full retirement age is generally equal to 50% of the primary worker's full benefit.

You can get an estimate of your future Social Security retirement benefits by visiting the Social Security website at ssa.gov and using the Retirement Estimator tool or by viewing your Social Security Statement. Your personalized statement contains a detailed record of your earnings history, as well as estimates of the retirement, survivor, and disability benefits you can expect at different ages. To view your statement online, you'll first need to register. If you haven't registered online, you'll receive your Social Security Statement in the mail every year if you are age 60 or older and not yet receiving benefits.

What are the warning signs of financial scams targeting older individuals?

If you or someone you know has been targeted by a scam artist who is trying to steal money or personal information, you're not alone. According to the Senate Special Committee on Aging, older Americans lose an estimated \$2.9 billion annually to fraud and exploitation, a number that is probably substantially underreported.¹

Most scams start with a call, an email, a text, or an official-looking letter that appears to be from a government agency or a legitimate company. Sometimes the scam artist will go door-to-door soliciting business or donations to charity.

Scam artists are very good at gaining the trust of well-meaning people by convincingly impersonating someone authoritative, knowledgeable, or trustworthy — such as an IRS agent, a tech repair person, or even a relative. They play on your sympathy or make convincing threats to pressure you to go along with a scam. "Send money or provide personal information right now," they say, "if you want to help someone or prevent something bad from happening." Here are some typical scenarios.

- **IRS scam:** "You owe back taxes and penalties. Send payment immediately via a wire transfer, or you will be arrested."
- **Sweepstakes scam:** "Congratulations, you've won a prize! To collect it, provide us with your bank account number so we can deposit a check."
- **Grandparent scam:** "Hi Grandma, it's me. Don't you recognize my voice? I've been in an accident and need money for car repairs. Send gift cards, and don't tell anyone because I'm embarrassed."
- **Home repair scam:** "I was just doing some work down the street for your neighbor, Bob, and I saw that you need some shingles replaced. I can do that for half the price I usually charge if you pay me in cash today."

If you are targeted, never give out personal information or send money. You don't need to make a quick decision. Call a friend, a relative, or the police for advice. Report the scam immediately to a fraud hotline such as the Senate Committee's toll-free hotline, (855) 303-9470.

How can you avoid falling for the Social Security imposter scam?

The scam generally starts like this. You answer a call or retrieve a voicemail message that tells you to "press 1" to speak to a government "support representative" for help in reactivating your Social Security number. The number on your caller ID looks real, so you respond. The "agent" you reach tells you that your Social Security number has been suspended due to suspicious activity or because it has been involved in a crime.

You're worried. You know how important it is to keep your Social Security number safe. So when the caller asks you to confirm this number to reactivate it, or says your bank account is about to be seized but the Social Security Administration (SSA) can safeguard it if you put your money on gift cards and provide the codes, you don't know what to do. If you balk, you may be reminded that if you don't act quickly, your accounts will be seized or frozen.

Although none of this is true (the SSA will never threaten to seize benefits or suspend numbers), many people have fallen for the Social Security imposter scam, and the numbers are rising. According to the Federal Trade Commission

(FTC), more than 76,000 reports of the Social Security imposter scam were filed between April 2018 and March 2019. Reported losses during this period were \$19 million, and almost half of the reports were filed in February and March 2019.¹

Here are some tips directly from the FTC to help you avoid becoming a victim.

Do not trust caller ID. Scam calls may show up on caller ID as the Social Security Administration and look like the agency's real number.

Don't give the caller your Social Security number or other personal information. If you already did, visit [IdentityTheft.gov/SSA](https://www.identitytheft.gov/SSA) to find out what steps you can take to protect your credit and your identity.

Check with the real Social Security Administration. The SSA will not contact you out of the blue. But you can call the agency directly at (800) 772-1213 to find out if the SSA is really trying to reach you and why. (You can trust this number if you call it yourself.)
